

Hilti PS300 ImageScan

1	<p>Use the ImageScan to view a large area image of the reinforcing bars in concrete.</p> <p>Perform a QuickScan to find out the direction of the rebar, then place the reference grid at right angles to the direction of the objects.</p> <p>Then select ImageScan from the main menu.</p>	
2	<p>Hold the scanner against the surface of the area to be examined, at the starting point line and in line with the grid.</p> <p>Press the record button to start scanning and move the scanner along the path of the reference grid.</p> <p>When the scanner has reached the end of the line it will automatically stop.</p>	
3	<p>Start a new path on the reference grid by moving the scanner into position and pressing the record button.</p> <p>You can discard a path by pressing the back button or skip a path by pressing the record button twice.</p>	
4	<p>The results of the scan are displayed on the screen after the last path has been scanned.</p> <p>The data is then saved in the active project.</p>
